

Software Design Architecture

Spring 25, Assignment 4

Name	ID	Contribution in assignment
Ansir Ali	L1f23bsse0388	
Muhammad Arham	L1f23bsse0372	

CLO	At the end of the course the students will be able to:	Domain	BT Level*	PLO
CLO3	Evaluate quality of software design	C	C5	PLO4

CLO-1		CLO-2		CLO-3		CLO-4	
Question	Points	Question	Points	Question	Points	Question	Points
-	-	-	-	1	40	-	-
				Total	40 + 10 = 50	Total	

Deadline: 25-June-25

Total Marks: 50

Portal Submission: 25 - 6 - 25 08:00 am (Only 1 submission per group is required) [5 Marks]

Hard Copy Submission: 25 - 6 - 25 (During Class, Only 1 submission per group is required)

Instructions:

- It's a Group assignment. Maximum 2 members per group is allowed.
- Only handwritten solution will be accepted.
- **Late Submission:** 25% penalty for the first day, 50% for the second day, and 100% for days later on.
- **Evaluation:** 60% marks will be for assignment and 40% marks will be based on evaluation (quiz or viva).
- **Plagiarism:** There is a strict policy against plagiarism and cheating. The penalty can be an F grade.
- **Title Page:** Attach this title page to your assignment, fill info in all boxes before submission. [5

Question #01

Given:

Ans by Ab
Mo Arham

Task characteristics:-

Task	Release Time	Time Period	Execution Time	Deadline
X	0	5	2	5
Y	0	10	3	7
Z	4	12	1	4

Timeline 0 to 20.

I Apply Fixed Priority Scheduling:-

• Semantic importance:-

• X → high • Y → medium • Z → low

$X > Y > Z$

• Deadline Monotonic:-

• Z → high • X → Medium • Y → low

$Z > X > Y$

• Rate Monotonic Scheduling:- (RMS)

• X → high • Y → medium • Z → low

$X > Y > Z$

Rate Monotonic Scheduling:-

Ans by Ali
Mr. Arham

Priority = $X > Y > Z$
According to Time period.

Deadline Monotonic Scheduling:

Priority = $Z > X > Y$

$\Rightarrow Z$ is released at 4.

According to deadline

period 12

4 - 16

Sementic Importance Scheduling:-

$$\text{Priority} = x > y > z$$
